SEVA SADAN'S

R. K. TALREJA COLLEGE

OF

ARTS, SCIENCE & COMMERCE

ULHASNAGAR – 421 003

CERTIFICATE

This is to certify that Mr./Ms. DIKSHA PRITAM KENE of F.Y. Information Technology (FYIT) Roll No. 2541016 has satisfactorily completed the Web Designing Mini Project entitled PORTFOLIO WITH DISPLAYED CERTIFICATES VIA JSON during the academic year 2025 – 2026, as a part of the practical requirement. The project work is found to be satisfactory and is approved for submission.

BUSINESS INTERNAL

INTRODUCTION:

This is my personal portfolio website created using HTML, CSS, and JavaScript. The main purpose of this website is to professionally present my profile as an FY BSc IT student, including my skills, projects, certificates, and contact details. HTML is used to create the basic structure of the website such as the navigation bar, hero section, skills section, projects section, and contact section. CSS is used to design and style the website with modern effects like glassmorphism cards, gradient text animation, smooth scrolling, and responsive layout. I have also implemented a dark and light theme feature using CSS variables. JavaScript is used to add interactivity such as theme toggle functionality, section reveal animations using Intersection Observer, cursor glow effect, and animated background particles using canvas. Overall, this project represents my technical knowledge in web development and demonstrates my ability to combine logic, design, and creativity into a professional portfolio website.

BUSINESS INTERNAL

REQUIREMENT SPECIFICATION :

This portfolio website requires a basic web development environment including a code editor and a modern web browser to run smoothly. The project is developed using HTML for structure, CSS for styling and design, and JavaScript for interactivity. The website should support responsive design so that it works properly on desktops, tablets, and mobile devices. It requires internet connectivity to load external resources such as Google Fonts and Font Awesome icons. The system should allow smooth navigation between sections like About, Skills, Certificates, Projects, and Contact. Functional requirements include theme toggle (dark/light mode), animated section reveal, background particle effects using canvas, and interactive buttons with hover effects. Non-functional requirements include fast loading speed, clean user interface, modern design, cross-browser compatibility, and good user experience. The website should be visually appealing, easy to navigate, and professionally represent the user’s academic and technical profile.

BUSINESS INTERNAL

SYSTEM DESIGN:

◆ 1. Architecture Type
Front-end based system
Client-side architecture (runs completely in browser)
No backend or database used

◆ 2. Main Modules / Sections
Navigation Bar
Hero Section
About Section
Skills Section
Certificates Section
Projects Section
Contact Section
Footer

◆ 3. Technologies Used
HTML → Structure of website
CSS → Styling, layout, animations, theme design
JavaScript → Interactivity and dynamic effects

◆ 4. UI/UX Design Structure
Responsive grid layout
Glassmorphism card design
Smooth scrolling navigation
Hover effects on buttons and cards

◆ 5. Functional Components
Theme Toggle (Dark/Light mode)

BUSINESS INTERNAL

Section reveal animation (Intersection Observer)
Cursor glow effect
Background particle animation using Canvas
Animated progress bars for skills

◆ 6. Data Flow

User clicks navigation link
Browser scrolls to respective section
JavaScript triggers animations when section becomes visible

◆ 7. Performance Design

Lightweight front-end structure
Optimized animations
Cross-browser compatible
Fast loading speed

This system design ensures the website is organized, responsive, interactive, and professionally structured.

SYSTEM IMPLEMENTATION:

SYSTEM TESTING AND RESULT:

System testing is performed to ensure that all components of the portfolio website work correctly and smoothly. Since this is a front-end based system, testing is done in the browser environment.

1 Functional Testing

Verified that all navigation links correctly scroll to their respective sections.
Checked theme toggle functionality (Dark/Light mode switching).
Tested section reveal animation using Intersection Observer.
Verified that skill progress bars animate when visible.
Checked that all external links (GitHub, Instagram, Email) open correctly.

2 UI Testing

Ensured proper alignment of text, cards, and sections.
Checked hover effects on buttons and cards.
Verified smooth scrolling behavior.
Tested glassmorphism design and animation effects.

3 Responsive Testing

Tested website on different screen sizes (desktop, tablet, mobile).
Verified grid layout adjusts automatically using auto-fit.
Ensured text and elements resize properly using flexible units.

BUSINESS INTERNAL

4 Performance Testing

Checked loading speed of animations and particles.
Verified smooth background particle animation using Canvas API.
Ensured no lag during scrolling or theme switching.

5 Browser Compatibility Testing

Tested website in modern browsers like Chrome and Edge.
Verified consistent appearance and functionality across browsers.
System testing confirms that the website is fully functional, responsive, user-friendly, and performs smoothly without errors.

RESULT:

https://diksha-72933.netlify.app/

FUTURE SCOPE AND

CONCLUSION:

Although the current portfolio website is fully functional and responsive, several improvements can be added in the future to enhance its features and performance.

~A backend system can be integrated to store contact form messages in a database.

~A dynamic admin panel can be added to update projects and certificates without editing code.

~More advanced animations and interactive UI elements can be implemented.

~SEO optimization can be added to improve search engine visibility.

~Hosting the website on a live domain can increase professional reach.

~Additional sections like Resume download, Blog section, or Achievement gallery can be included.

~Performance optimization techniques can be applied for faster loading.

These improvements will make the website more professional and industry-ready.

Conclusion

BUSINESS INTERNAL

The portfolio website is successfully designed and implemented using HTML, CSS, and JavaScript. It demonstrates modern web development techniques including responsive design, theme switching, animations, and interactive UI components. The project reflects strong understanding of front-end development concepts and practical implementation skills. The system is user-friendly, visually appealing, and efficiently structured to present academic qualifications, technical skills, and projects in a professional manner. Overall, this project enhances practical knowledge and showcases technical creativity effectively.

Visual Studio Code – Used for writing, editing, and managing the website source code.

Gemini AI – Used for idea generation, concept understanding, and guidance during development.

Google Chrome – Used for running, testing, and debugging the portfolio website.

GLOSSARY:

BUSINESS INTERNAL

HTML (HyperText Markup Language):
A standard markup language used to create the structure of web pages.

CSS (Cascading Style Sheets):
A styling language used to design and format the layout of web pages.

JavaScript:
A scripting language used to add interactivity and dynamic behavior to websites.

Responsive Design:
A design approach that ensures the website works properly on different screen sizes like mobile, tablet, and desktop.

CSS Variables:
Reusable custom properties used to store values like colors and make theme management easier.

Theme Toggle:
A feature that allows switching between dark mode and light mode.

Intersection Observer:
A JavaScript API used to detect when elements become visible in the viewport.

Canvas API:
A JavaScript feature used to draw graphics and animations directly in the browser.

BUSINESS INTERNAL

Animation:
A visual effect that creates movement or transition on web elements.

User Interface (UI):
The visual layout and design through which users interact with the website.
